Suspected Adverse Drug Reaction Report - Nurse Prescriber
Bramhall Medical Practice
Stockport, Greater Manchester, United Kingdom

Report completed: 15/05/2026 (15 May 2026)
Reporter: Sarah Ellison, Advanced Nurse Practitioner (independent prescriber)

PATIENT
Initials: withheld at the patient's request
Age: 45
Sex: Male
Weight: 92 kg

SUSPECT MEDICINE
Ibuprofen 400 mg tablets, one tablet by mouth three times a day with food, prescribed for mechanical low back pain.
Treatment started: 03/04/2026
Treatment stopped: 29/04/2026

REACTION
On 28/04/2026 the patient passed black tarry stools and felt faint. He attended the emergency department on 29/04/2026 where an upper gastrointestinal bleed from a duodenal ulcer was confirmed by endoscopy. Haemoglobin on arrival 84 g/L. He received two units of blood and intravenous omeprazole and was admitted for three nights.

OTHER MEDICINES
None. The patient does not take any regular medication and denies over-the-counter aspirin use.

OUTCOME
Recovered. Seen in the practice on 13/05/2026, well, haemoglobin 118 g/L.

Reporter's assessment: reaction related to ibuprofen - probable.
