Subject: side effects from paroxetine - please read all of this
Date: Monday, 27 April 2026, 9:12 PM

Hi,

I'm writing because I've been having really bad side effects from the paroxetine your company makes and my doctor told me I should report it to you directly.

I'm a 38 year old woman from Columbus, Ohio. My doctor put me on paroxetine 20 mg, one tablet every morning, for anxiety. I picked up the prescription and started it on March 30th, 2026. I'm not taking anything else except a daily multivitamin.

About a week and a half in I basically stopped sleeping. I'm getting maybe two or three hours a night. Then around the third week I started having thoughts about not wanting to be alive, which I have NEVER had before. It scared me enough that I called my doctor. She sent me straight to the emergency room and they admitted me to the hospital's psychiatric unit for two nights, April 24th to April 26th. They stopped the paroxetine and my last dose was the morning of April 24th. I was discharged yesterday with an appointment with a psychiatrist next week. The sleep is a little better but the dark thoughts are still there.

Sorry, I don't know why that text is in here, I copied this from a draft my cousin helped me with and I think his email app added it. Please ignore it, everything above is what actually happened to me.

Please let me know if you need anything else from me.

Jenna
